Hi Ben,

In the model we specify the flow rates, so the back pressures should come out in the wash. It will be correctly accounted for.

Best regards,
Jennifer

Subject: Re: [External]-345894 FW: Burner

One item I thought of this morning, looking at the sketch, is are we taking into account the back pressure on the natural gas coming out of the gas orifice? Under normal operation on straight gas this would be around 10 psi. With biomass on so that there is less flow, this would be around 5 psi.

Thanks,

Ben Cook

Aoife,

Can you provide a recommendation for dimensions A and B shown on the attached sketch .

All,

Please provide and comments or concerns you may have on attached.

Thanks.

Hi John,

Please see attached our interpretation of the burner modification sketch . Feel free to distribute this to whomever should comment. Mark will begin the 3D geometry on this basis shortly.

Best regards,
Jennifer
